PRE-PRODUCTION

Our pre-production team starts up on creating a rough story board from the client's input.

Following this, concept creation and final story board is executed. Final story board writing is done using the rough story board available. Then the scale drawings are made for the characters specified and the color scheme for those characters are applied.

2D ANIMATION

2D Animation is the process of creating a sequence of moving pictures in a two-dimensional environment, either through "traditional" hand drawn cell animation or through computerised animation software. From Mickey Mouse to Lion King, 2D animated shows have enthralled viewers of all ages for decades.

Using traditional cell animation and high end software's, we provide the following services

- Character Designing
- Background Designing
- Cell Animation
- Flash Animation

3D ANIMATION

Computer generated models far exceed physical models terms of quality and details. With physical models, it is hard to make dramatic camera movement whereas using 3D characters and sets it is easy to make shots with complex camera movements, which would have been difficult or nearly impossible in live shoot.

Viizon Box offers a range of 3D graphic and animation services for films and broadcast TV, Feature films, TV Series, Scene openers, Trailers, Teasers, Titling design, TV/Video commercials, Gaming content.
